Deleting Virtual Environment

I remember the first time I learnt about virtual environments; I was really confused. But I installed my first virtual environment and messed something up installing different things in it. So, just in case you are in a situation like this, you might want to delete the environment and start over, and you would do that by using the following command:

conda env remove -n <environment_name>

```
(test_pytorch) aseeskaur@Aseess-MacBook-Pro ~ % conda deactivate
(base) aseeskaur@Aseess-MacBook-Pro ~ % conda env remove -n test_pytorch

Remove all packages in environment /Users/aseeskaur/opt/miniconda3/envs/test_pyt
orch:

(base) aseeskaur@Aseess-MacBook-Pro ~ %
```
